

CBP

CHINO BASIN PROGRAM

Developing sustainable, local water supplies is a vital strategy for the future of the region's water supply. Once treated, recycled water can be used in a many different ways, from watering parks to replenishing the region's groundwater supplies. By developing these types of drought-resilient local supplies, we can increase the reliability and resiliency of overall local water supplies.

Overview

The Chino Basin Program (CBP) is a series of innovative water treatment and storage projects structured to modernize regional water supplies, storage, and delivery systems. Through several water infrastructure improvement projects, the CBP will help address challenges caused by importing water supplies through the development of new, local water supplies, thus increasing local water supply resiliency and reliability.

Once implemented, these projects will address the immediate needs of the region while unlocking the potential for additional storage and water recycling projects in the future. These projects also demonstrate significant benefits for state and local environmental and ecosystem health.

Proposed Improvements & Benefits

- **Improvement:** Construct a state-of-the-art Advanced Water Treatment Facility
Benefit: Significantly expand capacity to use recycled water and improve water quality
- **Improvement:** Construct injection wells and production facilities
Benefit: Drastically increase access to and capacity to store recycled water
- **Improvement:** Expand existing IEUA recycled water pipeline
Benefit: Efficiently utilize and access recycled water supplies and promote sustainability
